

Pay goes up. The worker's share goes down.

Both are true, and the model shows how.

saro-saravanan.github.io/ai-workforce-sim

PRICES

—3%

lower by 2040 than they would have been · United States

REAL PAY

+3%

likely between 2% and 6% · about \$2,000 a year
on a \$60,000 salary

THE ECONOMY

+5%

larger than it would have been

THE WORKER'S SHARE OF INCOME

−5.8 pts

The gains are real, and they go disproportionately to owners.

WHAT DECIDES IT

How much of the cost saving reaches prices.

Kept as margin: pay rises less, the owner share rises more.

ONE LEVER

Optimists and pessimists disagree about pass-through.

Move it in the What-if panel and watch the split change.

Will AI make us richer? On average, yes.

Who is “us”?
