

Three waves, not one.

And they run on three clocks.

saro-saravanan.github.io/ai-workforce-sim

WAVE ONE · SOFTWARE · NOW

By 2030, against where they would have been.

-
- Data scientists –10%
-
- Network and systems administrators –9%
-
- Computer support specialists –9%

WHY NOW

**Software-only AI needs
no factory, no permit and
no fleet.**

WAVE TWO · ROBOTS AND VEHICLES · LATER

0.2% →
5.0%

of task-hours, 2030 to 2040

WHY LATER

Production ramps. Permits. Hardware cost.

Not the software. The model's driving fleet tracks
Waymo's real count over 2024 to 2025.

WAVE THREE · AI-MADE CONTENT

Category by category.

- Translation and voice first: 74% of spending by 2040
-
- Video last: 8%

GROWING

The people who build and fix the machines.

- Production and maintenance work
-
- Work where a person is the product

Which wave is your industry in?
