

A model that cannot be wrong is worthless.

Here is where mine is scored.

saro-saravanan.github.io/ai-workforce-sim

GOLDMAN SACHS 2023

Employment effect 7.0%

Model 5.8% · below

IMF 2024

Advanced-economy jobs exposed 60%

Model 28% · below

ACEMOGLU 2024

TFP gain 0.66%

Model 4.8% · above

THREE OF THEM ARE ALSO PRESETS

Rebuild each report's assumptions with the same engine.

See how much of the disagreement is data and how much is assumptions.

BACKTEST · HYPERSCALER CAPEX

Within a few percent.

- 2025: observed \$413B · model \$400B
-
- 2026 guidance: \$725B · model \$720B

BACKTEST · REVENUE AND JOB CUTS

Within the band.

- AI revenue 2025: \$60B observed · \$55B model
-
- AI-cited cuts 2025: 55k announced · 63k model

THE HONEST ROWS

Two rows set a parameter and are marked calibration targets, not evidence.

Over 2023 to 2026 together the model overshoots announced cuts.

Where would you push hardest?

The Backtest view has every row
